

# Measles

IT ISN'T  
JUST A  
LITTLE  
RASH

Measles can be dangerous, especially for babies and young children.

## MEASLES SYMPTOMS TYPICALLY INCLUDE

- High fever (may spike to more than 104° F)
- Cough
- Runny nose
- Red, watery eyes
- Rash breaks out 3-5 days after symptoms begin

## Measles Can Be Serious

About 1 out of 5 people who get measles will be hospitalized.

1 out of every 1,000 people with measles will develop brain swelling due to infection (encephalitis), which may lead to brain damage.

1 or 2 out of 1,000 people with measles will die, even with the best care.

## You have the power to protect your child.

Provide your children with **safe** and **long-lasting protection** against measles by making sure they get the **measles-mumps-rubella (MMR) vaccine** according to CDC's recommended immunization schedule.

Children need to receive MMR at 12-15 months of age and again at 4-6 years for best protection.
